

EduPath – AI-Powered Career Guidance Agent

Problem Statement

Choosing the right academic stream and career path is one of the most important decisions in a student's life. However, many students struggle to identify the best option due to limited awareness, lack of personalized guidance, and scattered information about courses, colleges, entrance exams, required skills, and future job opportunities.

Most existing platforms provide generic information rather than recommendations tailored to a student's interests, strengths, academic background, and career aspirations. As a result, students may make uninformed decisions that affect their education and future careers.

There is a need for an intelligent system that can provide **personalized career guidance**, structured learning roadmaps, and reliable information through a single platform.

Objectives

The EduPath AI Career Guidance Agent aims to:

- Help students choose suitable academic streams and career paths.
 - Generate personalized learning roadmaps based on student interests and goals.
 - Provide information about courses, colleges, entrance exams, certifications, and career opportunities.
 - Recommend relevant skills, projects, internships, and learning resources.
 - Offer an interactive AI chatbot for real-time academic and career guidance.
-

Proposed Solution

EduPath is an AI-powered Career Guidance platform developed using **IBM watsonx Orchestrate, IBM BOB, Python Flask, and IBM Granite Models**.

The system uses multiple AI agents to provide:

- Career Guidance
- Learning Roadmaps
- Skill Development Suggestions

- Career Insights and Job Recommendations

Students can create a profile, interact with the AI chatbot, explore different academic streams, and receive personalized career recommendations through a modern web interface.

Expected Outcomes

- Personalized career guidance for every student.
 - Better stream and course selection.
 - Structured learning plans and skill development.
 - Improved awareness of career opportunities.
 - AI-assisted academic decision-making through a single platform.
-

Technologies Used

- IBM watsonx Orchestrate
 - IBM BOB
 - IBM Granite Models
 - Python Flask
 - HTML, CSS, Bootstrap & JavaScript
 - Git & GitHub
-

Conclusion

EduPath is designed to simplify career planning by combining AI-powered guidance, structured learning roadmaps, and personalized recommendations into a single intelligent platform. The solution helps students make informed academic decisions and prepare effectively for their future careers.
